

HEALTHCARE CONNECTED

POWERED BY MEDICOM

MEDICOM CONNECTS HEALTH DATA TO DRIVE ACCESSIBILITY AND INSIGHTS FOR A HEALTHIER WORLD

Facilitating secure, seamless information exchange between health systems and providers

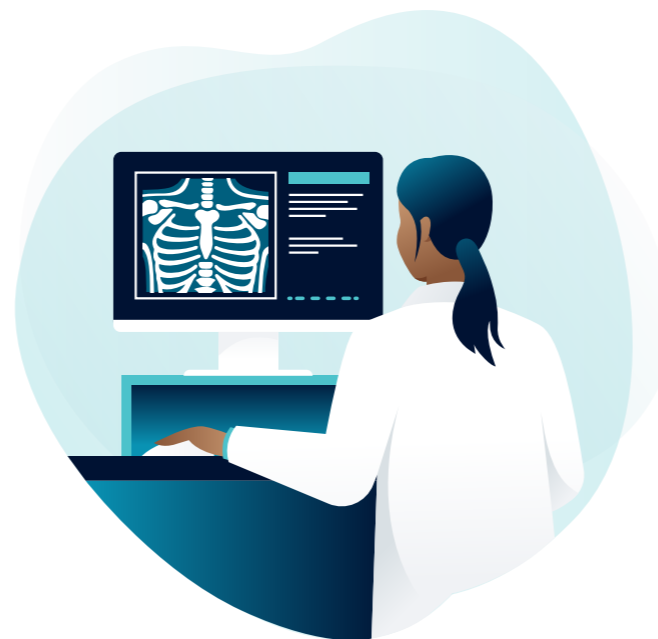

Providing a single pane of view for disparate, longitudinal health data

CONNECTING HEALTH INFORMATION

Medicom Connect enables interoperability between disparate silos of health information so that clinical records can be easily and securely searched and shared throughout a patient's care continuum.

Facilitate the sharing and accessing of disparate data through a single, vendor-agnostic platform that leverages existing systems in place.

Automate manual processes for locating, accessing, and sharing critical health data.

Eliminate less secure and inefficient methods previously used such as VPNs, CDs, and cloud transfer solutions.

INTELLIGENT INSIGHTS FOR RESEARCH

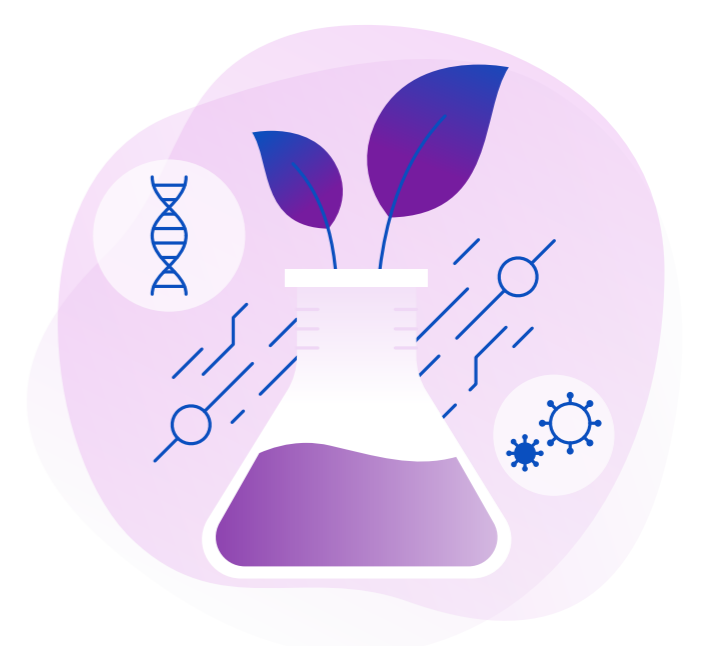

Medicom Intellect leverages our health information network, Medicom Connect, for longitudinal clinical information for academic research, AI development, and life sciences.

Leverage the Medicom Connect information network to give researchers access to de-identified longitudinal patient data.

Enable the research team to easily search, locate, and de-identify health data across the health system for advancing internal academic research initiatives.

Empower researchers to go to market with a stronger valued therapeutic and help patients see better outcomes through those innovations.
