

MEDICOM

Medicom is a healthtech company dedicated to creating innovative solutions for patients, health systems, and life sciences.

Medicom's platform accelerates access to clinically relevant data for healthcare delivery and advanced research. It enables providers, patients, and life sciences to readily search and share data across disparate ecosystems through a decentralized health information network. Data and insights from the Medicom Network help clinicians and researchers advance patient care and develop new therapies.

GIVE CLINICIANS ACCESS TO THE INFORMATION THEY NEED.

Decentralized Architecture

Increase the breadth and security of health information exchange.

Patient Matching

Automatically match inbound data to an existing patient record and reconcile the data.

Electronic Request

Enable medical records staff the ability to electronically send or fulfill requests for patient data to outside providers in a unified workflow.

Automated Federated Search

Utilize information such as patient demographics to automatically pull data related to a scheduled event like an appointment or procedure.

Ordering and Results

Route orders automatically and upon completion, the results are returned and filed to the correct patient record.

Automated Internal Prefetch

Ensure that data is available when and where clinicians and staff need it.

EMPOWER THOSE WHO NEED ACCESS TO DISPARATE HEALTH INFORMATION.

Patient Engagement

Provide patients with electronic access to view, manage, and share their health information with any provider participating in their continuum of care directly from their patient portal or browser.

Internal Research

Enable the research team to easily search, locate, and de-identify health data across the health system for advancing internal academic research initiatives.

Collaborative Partnerships

Efficiently & securely index, curate, & collaborate on longitudinal health data with life sciences & technology developers for collaborative research, machine learning, & multicenter clinical trials.

INTEGRATED CLINICAL WORKFLOWS THAT DRIVE VALUE.

- + Bring a patient's complete medical history into a simple search-oriented user-interface.
- + Automate the processes of obtaining, sharing, ingesting, and reconciling health information.
- + Leverage artificial intelligence to securely de-identify images and clinical documents for research initiatives.
- + Connect disparate health information systems to create a single system-wide interface for electronic health information exchange.

"Ever since the in-person onboarding, they have worked by our side, accommodating our every need. If a problem arises, we can go directly to their team for a solution, they are easy to talk to and quick to respond. Medicom just gets it - They truly are an extension of our team."

- Jordan Lopes - IT Applications Manager @ Ironwood Cancer & Research Centers
